

PRODUCT SPOTLIGHT

Wireless lighting control solutions from Daintree Networks are revolutionizing lighting in commercial and industrial buildings.

Daintree Networks

ControlScope® Wireless Lighting Control Systems

WHY WE RECOMMEND CONTROLSCOPE

- Lighting adjustments can be made via the dashboard and do not require a tech visit
- Recalibration of lighting zones can be completed at any time
- Automated activation, deactivation, and dimming extends the lifespan of LED fixtures
- Sensors respond to zone occupancy allowing for a reduction in active usage and leading to **higher energy-cost savings**
- Communication between sensors extends the reach of the ControlScope system to fit any facility size
- Data collection allows facility managers to gain a deeper understanding of asset usage

Benefits of Intelligent Lighting Controls

- Scheduling that turns on, turns off, and dims luminaires at preset times
- Occupancy sensing that turns lighting on or off based on whether an area is occupied
- Daylight harvesting that uses photosensors to detect natural light levels and adjust electric light levels accordingly
- Task tuning and personal control that adjust task and ambient lighting in a space to meet individual user preferences
