

## SHOPPING CENTER GETS GREEN WITH EV

For information on how EV charging could benefit your property, contact us at [www.MontereyEnergy.com](http://www.MontereyEnergy.com)

### Our Customer

An environmentally-conscious and family-friendly shopping center wanting to meet the raising demand for electric vehicle charging and provide a convenient service for their shoppers.

### Our Solution

To ensure shoppers are able to get a full charge even if they are only making a quick stop, we replaced our customer's older EV charging stations with Blink's DC Fast Charger, providing certain vehicles with a full charge in under 30 minutes. We also installed additional Level 2 chargers for shoppers with a more relaxed schedule.

### Blink's Unique Design Features Include:

- Modern, stylish appearance
- Selective height design for convenient conformity with ADA considerations
- 360° beacon light to assist in locating the station

## CUSTOMER BENEFITS

Beyond adding another reason for shoppers to choose our customer's location over other shopping centers, Blink charging stations provide our customer with extra revenue streams. In addition to reselling the electric charge, the Blink EV charging stations include advertising opportunities for our customer to offer to their tenants and other local businesses.
